Global Sustainability Scholars

What is GSS?

Global Sustain+Ability Scholars program trains and supports rising young professionals from diverse backgrounds, disciplines, and worldviews. We are a professional community, working on global sustainable development challenges that face communities and environments.

GSS Approach

We have three synergistic programs that aim to broaden participation in sustainability STEM:

- **GSS Scholars:** Undergraduate students
- **GSS Early Career Fellows**: Graduate students
- **RaMP-UP Tropical BioDiversity Fellows:** Post-baccalaureate scientists

Want to get involved as a project partner with GSS? We'd love to hear from you and encourage you to reach out at gsscholarinfo@gmail.com.

GSS Scholars and Early Career Fellows Programs:

The GSS Scholars and Fellows programs are 10 week paid summer professional training experiences with international research projects.

Scholars and Fellows come away with a robust and meaningful research experience, scientific products, a strong professional network, and dedicated mentors to advocate for their careers.

2024 GSS Cohort

CIRES Project Highlight

Two PhD students in the Ecology and Evolutionary Biology department at CU Boulder will work with EarthLab/ESIIL this summer to analyze environmental data and build critical data science skills.

Vivian Li

Asia Kaiser

RaMP-UP Tropical BioDiversity Fellowship

1 year paid research experience with the Smithsonian Tropical Research Institute in Panamá practicing cutting-edge field research methodologies that aim to understand and protect tropical biodiversity.

Each year, STRI Scientists will have openings for RaMP-UP Fellows to join their research groups. In 2024 we will have a number of research projects from tropical marine systems to the canopies of tropical forests.
